Person Id	Problem	App/Website found	Likes	Don't like	Improvements
1.	To find out gas station nearby in cheap price	Google map, GasBuddy	Shows all the nearby gas stations in a given route.	Does not show the gas station with cheapest gas price in a given route.	When someone inputs a destination, the app can show the gas stations sorted according to gas price (lowest to highest) so that the user can choose the most convenient one based on the distance and the price
2.	To find public restroom nearby	Where is Public Toilet	Shows the locations of all the nearby public restrooms in a given area.	Does not show the opening and closing times of most of the restrooms, very poor interface.	Need to develop an app where users themselves can enlist restrooms, update the time info, give rating so that other users can find out which one is convenient for them
3.	To find suitable rental house	Craigslist, Zillow	Provides information on vacant houses in an specific area in a given price range.	The interface is not user friendly, a lot of houses that are vacant are not listed there.	Need to create a common platform so that landlords can share information of all the vacant housers by themselves and the customers can visit the info and contact the landlords free of charge.;
